SecureScore Health Insurance Policy Guide

1. Policy Overview

This policy provides health insurance coverage for hospitalization, outpatient treatment, diagnostic tests, and prescribed medicines.

The annual sum insured is 500,000 rupees per policy year, and the policy renews every 12 months.

Coverage begins on the Policy Start Date and ends on the Policy Expiration Date shown in the policy schedule.

2. Covered Services

Inpatient hospitalization is covered for stays of at least 24 hours, including room rent, surgeon fees, and nursing charges.

Outpatient consultations and laboratory tests are covered up to 20,000 rupees per year.

Emergency admissions are covered immediately, and the hospital must notify the insurer within 48 hours.

3. Exclusions

Cosmetic surgery, dental treatment without accident, and experimental treatments are not covered.

Pre-existing conditions are excluded during the first 24 months of the policy.

Claims for services received outside the policy period are rejected.

4. Claim Submission

A claim must be submitted within 30 days of the discharge date or the service date.

Required documents include the claim form, hospital bill, discharge summary, and a valid diagnosis code.

Claims above 100,000 rupees require pre-authorization before treatment, except in emergencies.

Incomplete claims are placed Under Review until the missing documents are provided.

5. Network Providers

Treatment at a network provider is cashless, and the insurer pays the hospital directly.

Treatment at a non-network provider is reimbursed after claim approval, with a 20 percent co-payment.

The distance between the patient and the provider is checked, and unusually long distances trigger a review.

6. Fraud Detection and Verification

Every claim is scored by a machine learning model that estimates the probability of fraud.

Claims with a fraud probability above 0.30 are flagged as High risk and sent for manual review.

Common fraud indicators include duplicate claims, inflated claim amounts, an unusually high number of procedures, and billing for services never provided.

Providers whose fraud rate rises year after year are flagged as Rising and audited by the investigation team.

Policyholders found submitting fraudulent claims face claim rejection and policy cancellation.

7. Claim Decisions and Loss Ratio

Each claim is assigned one of three statuses: Approved, Rejected, or Under Review.

Only Approved claims count as paid losses when calculating the loss ratio.

The loss ratio is the total claims paid divided by the total premium collected, and the target range is 60 to 80 percent.

Appeals against a rejected claim must be filed within 15 days of the decision.
